PREFACE.

The Dictionary proper has been published in 1911. As was mentioned in its Preface it would be followed by a large Index „arranged alphabetically according to the names of the plants in the modern languages" used in the Dictionary.

It is this Index which is now offered to the Public, it has grown even more extensive than was anticipated because it contains not only the names of the plants occurring in the Dictionary proper but also of parts of plants mentioned there.

In view of the enormous amount of work involved the fact that the Index appears nearly 5 years after the Dictionary proper will cause no surprise.

Although the editor flatters himself that the number of misprints is considerably less than in the first parts of his work, he yet knows but too well that this work is not flawless in this respect either.

Yet he should like to warn against a possible tendency on the part of the reader to consider names, spelled in an unusual way, as evidence of faulty correction.

F. i. the German word „moos" (English: moss) is frequently spelled „mos". This is no misprint but the spelling according to NEMNICH. In all cases the spelling of the authors mentioned has been followed as closely as possible.

In some cases the editor has taken the liberty to refer other plants than those indicated by the authors to the names quoted from them.

For instance PRITZEL and JESSEN refer to Alpinia chinensis ROSCOE the vernacular name of the rhizome referred by the editor to Alpinia officinarum Pr. I, because it has been proved that the rhizome in question belongs to the latter species.

All sheets up to p. 1208 have been examined by the editor once more after having been printed with the view of making the list of misprints as complete as possible.

Lack of time has prevented him from examination of the later sheets in this respect.

AMSTERDAM, July 1916.

List of Abbreviations in the Index and explanatory remarks.

v. is always used to refer to one or more scientific plant-names in the Dictionary, f. i. „aroosha fibre v. Callicarpa 2 Pr., 3 Pr."

In this case one finds in the Dictionary that Callicarpa cana and Callicarpa lanata produce this fibre.

a., *ga.*, *ge.* and *n.* have the same signification as in the Dictionary. When found in the Index they almost always indicate that the name thus marked is not found in the Dictionary. As an example the editor gives „duren v. Typha, T. 2 *n.*"

In this case duren is found in the Dictionary for Typha, but is to be added as a Dutch name for Typha angustifolia.

† is only found before obsolete scientific plant-names.

}obsol.{ is only used after a name in one of the modern languages, and is only used in the Index after a name which has not been mentioned in the Dictionary.

}add.{ is commonly only used after a scientific name which is not found in the Dictionary; in rare cases it is also used after a vernacular name.

}to be printed in italics; 1914{ when mentioned after a Dutch name signifies that this name was adopted as an official Dutch name in the year 1914.

}not in italics; 1914{ after a Dutch name signifies that this name was adopted as an official name in 1906, but that after 1914 it is no longer an official name. Possibly in a few cases this remark has been printed }not in italics{. Occasionally „cancel }1914{" will be found after a Dutch name, printed in italics in the Dictionary. This means that this name should be cancelled not only as an official but also as an ordinary Dutch name.

Often the same vernacular name is used in more than one modern language. As an instance the editor gives:

corinde v. Cardiospermum, C. 2; Syringa 6.

The name corinde is a French name for Cardiospermum and C. Halicacabum, but it is given by Pritzel and Jessen as a German name for Syringa vulgaris.

As an other instance may be given:

dock v. Arctium; Malva 6; Nymphaea 2; Petasites; Rumex, R. 10, 21, 23, 26; Tussilago 1.

The name dock is found as a Dutch name under Arctium, Nymphaea alba }also docke{, Petasites }also docke{ and Tussilago Farfara }also docke{; dock is found as an English name under Malva sylvestris }given as such by Hal. Wr. according to Epln. p. 152{, under Rumex, R. crispus, R. obtusifolius, R. Patientia and R. sanguineus.
